

P4P

Pay for Performance was a program developed through the state's Public Utilities Commission. The program is based on certain criteria such as minimum size of electrical demand and energy savings. Primary directed toward a buildings thermal energy reductions. This program requires a higher degree of engineering, monitoring, and verification as compared to other available programs. Only selected trained P4P Partners can offer the program. Partners must be able to conduct a building simulation model as part of the qualification and payment process.
